Report

The formation of the report looks pretty well structured. Illustrations are excellent and help to understand what the algorithm does. At the same time, part with experiments could be probably more informative.

Repository

1. There is information about the repository structure that helps to find needed information faster.
2. It could be better to add pictures from a report into the repository to find results faster.

Reproduce

In part of reproduce of training network have issues.

1. In requirements.txt could be better to add version of packages in case of major changes in libraries in future.
2. It will be good to fix parameters for run training. In the readme file in GitHub, not all parameters worked (for example, Normal instead of average).
3. Not all libraries were added to requirements.txt. I manually added some packages (like torchvision).
4. For the first run, I faced with error and need manually change code train.py to train a model.

Traceback (most recent call last):
  File "ENOT-main/train.py", line 214, in <module>
    flow=flow,
NameError: name 'flow' is not defined
